

NKENEL HOLDINGS (PTY) LTD

COMPANY PROFILE: SUPPLY CHAIN, TRANSPORT & LOGISTICS

ABOUT

Nkenel Holdings (Pty) Ltd is a supply chain and logistics company moving cargo, commodities and bulk material across Gauteng, Mpumalanga and South Africa. We offer general cargo and road freight, freight brokerage, back-to-back commodity trading and mining logistics, which remains our long-term core.

Supply chains are structured and time-sensitive: a loading window, a route, an offloading slot, a production schedule. We work to the structure of yours and hold every link to the standard you set, from origin to offload.

COMPANY & COMPLIANCE CREDENTIALS

Registered Name	Nkenel Holdings (Pty) Ltd
CIPC Registration No.	2025/844052/07

Enterprise Type	Exempted Micro Enterprise (EME)
Ownership	100% Black-Owned, 100% Youth-Owned
Main Base	eMalahleni, Mpumalanga
Head Office	Centurion, Gauteng
Website	nkenelholdings.co.za

SERVICES

General Cargo & Road Freight	Local, regional and national cargo on tautliners, flatbeds, superlinks and side tippers, including the N4/N12 Gauteng-Mpumalanga industrial and mining belt and the N3 to Durban.
Freight Brokerage & Subcontracting	Verified truck operators matched to cargo owners, with capacity scaled up or down as volumes demand. Every shipment is inspected and monitored to the same standard as our own fleet.
Back-to-Back Commodity Trading	Sand, aggregates, coal and minerals sourced from permitted, compliant partners and matched to off-take clients, with transport and delivery managed end to end.
Mining Logistics	Coal, chrome, iron ore, aggregate and bulk minerals between pit-heads, processing plants, sidings and stockpiles, with weighbridge and cycle-time optimization.

EQUIPMENT

Matched to the cargo, run by our fleet and vetted partner operators. All configurations backed by verified Goods-In-Transit (GIT) cover and certified load-securing equipment.

Tautliners	Curtainsiders for secure, weatherproof FMCG and general cargo, with fast side loading.
Flatbeds	Industrial, construction and specialised cargo that needs open or oversized loading.
Superlinks	High-payload bulk and heavy cargo hauled efficiently over longer distances.
34-Ton Side Tippers	Our core mining fleet, suited to bulk ore and aggregate haulage where fast, high-volume offloading matters.

QUALITY ASSURANCE

Quality is how we run every load. Every service follows the same six steps, from origin to offload.

1. Brief and scope	Origin, destination, material, volumes, windows and site rules confirmed before anything moves.
2. Vet before we assign	No load is assigned until the operator, vehicle and driver clear our vetting checks.
3. Inspect and dispatch	Vehicle, load or commodity inspected, documented and released against the agreed window.
4. Monitor the trip	Progress tracked against set milestones, with exceptions escalated early.
5. Offload and verify	Delivery inspected at the destination against the original brief and paperwork.
6. Close out and review	Proof of delivery and reporting returned to you, and any variance reviewed and corrected.

Our four commitments

Subcontractor vetting	Goods-in-transit insurance, vehicle licensing and roadworthiness, tracking, and driver permits and checks, verified before assignment.
Trip monitoring	A milestone-based framework: confirmed departure, in-transit checks and confirmed arrival.
SLA compliance	Service levels agreed up front, measured on every trip and reported back, with corrective action when missed.
Risk control	Cargo safety, documentation and incident procedures set before the trip, to protect cargo and avoid downtime.

INSPECTION BY SERVICE

Road Freight	Freight Brokerage	Commodity Trading
Pre-trip vehicle check	Operator vetting before assignment	Source and permit verification
Load count, condition and securing	Loading and delivery inspection	Specification, sampling and weights
Delivery inspection and digital POD within 24 hours	Variance reporting and review	Certificates and delivery verification

SAFETY & COMPLIANCE

Nkenel Holdings runs a rigorous, strictly-enforced safety and compliance vetting process: every driver, truck and trailer is checked before it is cleared to run a load.

Drivers	Valid Professional Driving Permit (PrDP) and mine-site health & safety induction.
Vehicles	Roadworthiness vetted against Certificate of Fitness (COF) and the National Road Traffic Act, with live telematics and speed governors.
Compensation	Cover maintained in line with the Compensation for Occupational Injuries and Diseases Act (COIDA).
Operations	Load, access and turnaround procedures aligned with each site's own health and safety requirements, including MHSA / DMRE standards.

COVERAGE

Local	Site-to-site, depot, plant and stockpile runs within a town, metro or mining belt.
Regional	High-frequency scheduled and ad hoc runs across the Gauteng-Mpumalanga industrial and mining belt, along the N4 and N12 corridors.
National	Long-distance trunking from Gauteng and Mpumalanga to key distribution centres and coastal freight routes, including the N3 to Durban.
